SKILLS

- Python
- JavaScript
- HTML, CSS
- Next.js, Tailwind
- Three.js
- SQL
- Machine Learning
- OpenCV
- Scikit-learn
- Git, GitHub

CERTIFICATIONS

- IBM Data Science Professional Certificate
- IIT Madras — School Connect

PROFILE

Ambitious Python developer and Class 12 Science student with a strong focus on Artificial Intelligence and Data Science. Driven by a 'learn by building' philosophy, consistently translating complex theoretical concepts into functional, high-impact projects. Adept at leveraging modern web technologies and machine learning tools to engineer innovative, practical solutions.

PROJECTS

Neon Void — 2D Arcade Engine

2026

Engineered a custom 2D game engine for a Harvard CS50x Problem Set; Implemented infinite parallax scrolling mathematically designed to prevent visual drift; Programmed multi-phase boss mechanics using robust state machine logic; Developed a localized vector particle system for dynamic explosions and integrated a global broadcast pipeline for seamless UI transitions.

Nitro Rush — 3D Racing Game

2025

Engineered an immersive 3D web-based racing environment utilizing Three.js; Implemented custom game physics, responsive vehicle controls, and dynamic particle effects; Designed a logic-driven AI opponent to provide competitive and adaptive gameplay.

Face Authentication System

2025

Built a robust computer vision application for identity verification using OpenCV; Engineered real-time face detection capabilities with continuous video stream processing; Designed a secure, low-latency authentication pipeline based on facial recognition logic.

EDUCATION

Class 12 — Science Stream (CBSE)

2015-2027

The Newtown School
